SIMPLE TRACKING SYSTEM

Patient Tracking & Family Reunification

SIMPLE TRACKING SYSTEM

A novel and intuitive app for tracking individuals from the emergency scene to safety following any mass casualty incident.

- Integrate with hospitals to track surge capacity and emergency department availability
- Provide families with status information on their loved one(s)
- Track and manage witnesses for processing and interviews
- Assist in identifying and tracking of fatalities

www.simpletrackingsystem.com

Simple Tracking System addresses many of the recommendations provided in the **Mass Shootings in American Cities: Mayors' Experiences and Lessons Learned** document, highlighted below —

Hospital Capacity

- The surge capacity of area hospitals should be known to planners so that multiple victims requiring treatment are not taken to facilities unequipped to handle them.

Call Center

- A call center must be established immediately following the incident to handle the volume of calls seeking a wide range of information on an incident—names and conditions of victims chief among them.

Aftermath: Incident Victims

- Following the securing of the incident site, wounded victims must immediately be stabilized, treated on site, and transported to hospitals.

- Following the requisite crime scene investigation...the slain victims must be removed to an appropriate facility for identification—by family members or other appropriate persons or by other means.

- An emergency response center may be designated to accommodate the identification and processing of fatalities.
