

Law Enforcement Use Cases

SIMPLE TRACKING SYSTEM

Our novel and intuitive app for tracking and reunification, Simple Tracking System, was developed by first responders and can be used in a multitude of law enforcement responses, highlighted below —

WITNESSES

Following a mass casualty incident, STS can be used to track and prioritize individuals who need to be interviewed, especially in the case where follow-up action needs to be taken. STS can also assist in reunifying witnesses with their loved ones.

MASS ARRESTS

During civil disturbances, protests, or riots, STS can help law enforcement in the tracking and managing of mass arrests. By using STS, law enforcement can quickly and easily locate individuals in custody and keep track of their movements during processing.

CRITICAL CITIZENS

STS can be used to track and manage a community's most vulnerable citizens to include the homeless, adults and children prone to wandering, and missing person(s). In emergencies, STS can identify and reunify these critical citizens with their family and friends.

Law enforcement can also utilize STS during evacuations, drills and exercises, special events, and MCIs when police may transport patients to the hospital.
