

# Family Assistance & Reunification

# SIMPLE REUNIFICATION SYSTEM

Our novel and intuitive app for reunification, SRS, assists communities following an emergency in documenting who needs assistance and why. A record is created for every in-need citizen to link families and animals, provide situational awareness of needs and resources across an impacted area, track transfers or transports, and reunify families worldwide.

## REGISTER & LINK FAMILY UNITS

The SRS app is used to document citizens as they arrive at the center, capturing a facial photo and additional information (name, emergency contact, demographics, and resource or medical needs). Individuals, including service animals and pets, can be linked into one family unit for tracking purposes.

## ACCESS FOR NEEDS

Center staff, volunteers, and partners can access the database to track resource requests, including medications, equipment, transportation or lodging, to drive coordination and decision-making. Analysis can be provided for a singular center or across multiple centers operating in response to a larger disaster.

## VERIFY & REUNIFY

SRS can be used to verify citizen identify during transfers outside the center for medical care or longterm assistance. Families outside the impacted area can request information on their missing loved ones and SRS can facilitate reunification through image or data matching.

## PRODUCT FEATURES

- Tagless
- Scalable
- Cloud-based
- Smart device application
- Inexpensive
- Unlimited users
- Geolocation
- Multilevel encryption
- HIPAA-compliant
